DETAILED ACTION

Claims 1-16, and 21-23 filed on 08/10/06 are directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 17-20 are, directed to the process of making or using an allowable product, previously withdrawn from consideration as a result of a restriction requirement, claims 1-23 are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, the restriction requirement as set forth in the Office action mailed on 08/25/04 is hereby withdrawn. In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claims including all the limitations of an allowable product claim or rejoined process claim are presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

1. Claims 1-23 are allowed.

The following is an examiner's statement of reasons for allowance: the references cited disclose a molecularly flexible dielectric substrate comprising: a first

layer of molecularly flexible dielectric adhesive, first and second metal foils defined pattern of first and second electrical conductors, and some other claimed elements. However, they do not disclose or render obvious in combination of the substrate having a plurality of electrically conductive vias through said first layer of molecularly flexible dielectric adhesive, said plurality of electrically conductive vias being in a pattern for providing electrical connection between ones-of said pattern of electrical conductors on the first surface of said first layer of molecularly flexible dielectric adhesive and corresponding contact sites on a second surface of said first layer of molecularly flexible dielectric adhesive opposite the first surface thereof (claim 1), a protective enclosure surrounding the electronic device having attached at least along its periphery to the molecularly flexible dielectric adhesive layer (as recited in claim 4), an underfill adhesive bonding the electronic device and said molecularly flexible dielectric adhesive layer (as recited in claim 5), a plurality of electrically conductive vias through the first layer of molecularly flexible dielectric adhesive, the plurality of electrically conductive vias being in a pattern for providing electrical connection between ones of the first electrical conductors and ones of said second electrical conductors (as recited in claim 9), and wherein the plurality of electrically conductive vias are in a-pattern for providing electrical connection between the metal foil and corresponding contact sites on a second surface of the first layer of molecularly flexible dielectric adhesive opposite the first surface thereof (claim 17).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
